East Coast Steam has been a steam boiler manufacturer for more than 30 years in Australia, building all their vessels in their Brisbane-based workshop. One of the last Australian boiler manufacturers, East Coast Steam tries to use Australian-made materials where possible. The vessel range starts with the vertical water tube boilers (60Kw-1,250Kw) through to large water tube boilers (1,500Kw-10,000Kw).

Over the years, East Coast Steam has supplied its vertical range to various brewery set-ups across the country, including Eagle Bay Brewing, Colonial, Duckstien, Last Drop and Mandoon in WA. The company also has several boilers in Victoria, NSW and QLD, including Byron Bay Brewing and Burleigh Brewing. They also export boiler firing on

Bio-Gas to Africa for projects for SAB-Miller.

Recently, East Coast Steam has become more involved in assisting with the whole steam system, the boiler to brewing vessel marry up. Having worked with East Coast Steam on various jobs prior to new venture Balter Brewing, Scott Hargraves, was keen to get them involved again. Hargraves ordered his system, hot liquor tank, mash mixer and steam kettle from DME. East Coast Steam coordinated the steam pipe work, with the new 400Kw boiler and the ancillary equipment to make everything work together from controlling solenoids and valves, to pressure regulators and steam traps.

East Coast Steam vertical boilers up to 500Kw require no boiler tickets and are easy to operate and maintain, they meet all Australian standards and come with a five-year warranty on the pressure vessel.
